

ONLINE ACTIVITY #2
Personalized Linux, and Git Cheat Sheet

1. BASIC LINUX COMMANDS

COMMAND	SAMPLE USAGE	PURPOSE
pwd	pwd	Shows the folder you are currently in.
ls	ls -la	Lists files and folders; -l gives details, -a includes hidden files.
cd	cd Documents	Moves to another directory.
mkdir	mkdir projects	Creates a new directory.
touch	touch notes.txt	Creates a new empty file.
cp	cp notes.txt backup.txt	Copies a file or directory.
mv	mv notes.txt Documents/	Moves or renames a file.
rm	rm notes.txt	Removes a file.
cat	cat notes.txt	Displays file contents in the terminal.
echo	echo "Hello"	Prints text to the terminal.
clear	clear	Clears the terminal screen.
man	man ls	Opens the manual/help page for a command.

2. BASIC GIT COMMANDS

COMMAND	SAMPLE USAGE	DESCRIPTION (MY WORDS)	COMMON FLAGS
git init	git init	Starts a new Git repository.	-q, --bare, -b
git restore	git restore file.txt	Restores a file, undoing selected working-tree changes.	--staged, --source
git status	git status	Shows changed, staged, and untracked files.	-s, -b
git branch	git branch feature	Lists, creates, renames, or deletes branches.	-a, -d, -m
git add	git add .	Stages changes for the next commit.	., -A, -p
git checkout / git switch	git switch feature	Changes the current branch; switch is the clearer modern command.	-b / -c, -d
git commit	git commit -m "Update"	Records the staged snapshot in repository history.	-m, -a, --amend
git merge	git merge feature	Combines another branch into the current branch.	--no-ff, --abort
git log	git log --oneline	Shows commit history.	--oneline, --graph, -n
git tag	git tag v1.0	Marks a specific point in history, often for versions.	-a, -d, -l
git diff	git diff	Shows differences between file states.	--cached, --stat
git clone	git clone <URL>	Creates a local copy of an existing repository.	-b, --depth

3. GIT THREE-TREE ARCHITECTURE

Working Tree → **Staging Area (Index)** → **Repository (HEAD/history)**

- Working Tree: the files you are currently editing on your computer.
- Staging Area / Index: the changes selected for the next commit (git add).
- Repository: committed snapshots and project history (git commit).

Quick flow: edit → git add → staged → git commit → saved in history
